WebAdvisor, Rider’s online class registration service, has been causing some students registration problems after it went through an overhaul this year. The program now considers prerequisites when allowing you to choose courses.

Stefanick agrees and said that it eliminates the long lines that used to build up. “It’s been an advantage to the students,” she said. She said she doesn’t see the problems that are still existing as a big hindrance and can easily be resolved. Most of the problems were taken care of right away, and any other problems will be resolved as soon as they are reported. “Students who have issues can come in and talk to someone and work it out,” she said. “I encourage people to come in so that we can change the things that we need to change.”

She said that with the help of students, the system can be modified so that eventually all of the minor issues, such as the conflict with the replacement courses that weren’t recognized, can be resolved.

 “[The students’ help] is the reason why we can make things better,” said Stefanick.

your major or minor and are trying to take a course that only allows declared majors or minors to take, she said.

Junior Liz Dintino experienced another, unusual problem. “I couldn’t even get on to WebAdvisor at all,” she said. “I had to call OIT and they had to delete my account and put it back into the system.”

Fortunately, she caught the problem before the time actually came to register for classes.

“I went on the day before I registered and it was like that,” said Dintino. “Thank God I registered and it was like that,” she said. “Seventy-nine percent of students register for classes using WebAdvisor, which is an all-time high for the undergraduate population.”

Freshman Jessica Presuto didn’t experience any problems and said her registration was easy. “It was the easiest thing ever,” said Presuto. “I registered for my classes so quickly and it was easier than going to the Registrar.”

Fortunately, she caught the problems were taken care easily be resolved. Most of

was easier than going to the Registrar.”

Unfortunately, she caught the problems before the time actually came to register for classes.

“Once problems come up we’ll make modifications,” she said.

She said that overall the system doesn’t seem to have that many problems and it actually helps students by prohibiting them to take classes that they can’t take without prerequisites.

“It’s been a great experience because it’s working really well,” she said. “Seventy-nine percent of students register for classes using WebAdvisor, which is an all-time high for the undergraduate population.”

Students who have issues can come in and talk to some one and work it out,” she said. “I encourage people to come in so that we can change the things that we need to change.”
